ESSENTIAL OIL COMPOSITION

The invention relates to medicinal and cosmetic compositions comprising an essential oil in combination with at least one spice and/or at least one herb. Such compositions may be taken orally or may be absorbed through the skin.

Essential oils have been used for thousands of years in aromatherapy. The ancient Chinese are generally acknowledged as the founders of aromatherapy, but it is more than likely that quite early in the history of civilisation man had realised that certain aromatic plants could help restore his health. Aromatic substances were also used by the ancient Egyptians and Ancient Greeks as medicinal perfumes.

In the 10th century the Arabs were extracting essential oils from aromatic plants and using them medicinally. The Knights of the Crusades brought aromatic essences and waters back to Europe from the Middle East and they became so popular that perfume began to be manufactured and was well established by the end of the 12th century. The importance of aromatic plants for other purposes was realised early. When the bubonic plague reached England around the middle of the 14th century, fires were ordered in the streets at night, burning aromatic

frankincense and pine; indoors, incense and perfumed candles were burnt to combat infection and disguise the stench of death; pomanders made from aromatic gums and resins were worn on ribbons round the neck to protect the wearers from the dreaded Black Death.

By the turn of the 18th century essential oils were widely used in medicinal preparations and Salmon's dispensary of 1896 contains recipes for numerous aromatic remedies. In the 19th century, essential oils were subjected to more scientific investigation, and it was discovered that some of them could be synthesised from other materials. As it is always quicker and cheaper to produce the laboratory versions than natural plant extracts, true essential oils began to fall from favour. Today, many of our medicines and perfumes contain so-called essential oils, though often they are mere imitations; while synthetics may smell like the real thing, they do not possess the same therapeutic properties.

Essential Oils

Essential oils are highly scented droplets found in minute quantities in the flowers, stems, leaves, roots and barks of aromatic plants. They are not true oils in the manner of lubricant vegetable oils, but highly fluid

and exceptionally volatile.

Essential oils are complex mixtures of different organic molecules - terpenes, alcohols, esters, aldehydes, ketones and phenols. Synthetic oils are usually made from one or more of the constituents predominant within a particular essential oil; menthol, for example, often substitutes for mint and eucalyptol for eucalyptus. However, there are sound reasons for believing that it is the interaction between each and every component that gives an essential oil its particular character and unique therapeutic properties.

The chemical composition of an oil is related to the time of day, the month or the season. Jasmine develops a strongly scented indole molecule at midnight when it is particularly intoxicating, and it is important to gather the petals at exactly the right moment. There are good years and bad years for essential oils as there are with wines. Some commercial producers have discovered that they can improve the quality of a poor yield by adding certain components and that an expensive oil like rosemary can be adulterated, without altering its aroma, by adding 30-40% of camphor which is considerably cheaper for the perfume industry. Such adulteration may be commercially

acceptable but it might well alter the therapeutic properties of the oil. It is important to try to ensure that essential oils come from reputable sources and are as pure as possible.

Experts recognise an essential oil by its aroma and check its composition by a process called Gas Liquid Chromatography. Colour can also be an indicator; eucalyptus is colourless, chamomile varies from white to blue and others, like basil and sandalwood (both light greenish-yellow), are in pastel shades. Yet others are richly pigmented, like jasmine, a deep reddish-brown, patchouli, brown, and rose, orange-red.

Extraction of the Oils

Essential oils may be extracted from plants in a number of ways. One of the oldest methods is distillation, practised in ancient Persia, Turkey and India thousands of years ago. The Egyptians were preparing essence of cedarwoods for embalming and other purposes around 2000BC; the wood was heated in a clay vessel covered by a screen of woollen fibres through which the steam had to pass. The essence was obtained by squeezing out the impregnated wool.

The Arabs are credited with having popularised distillation in the late 10th century. They began with extract of rose petals then experimented with other aromatic materials. Today, distillation remains the most commonly used means of extracting essential oils.

Other methods include *enfleurage*, often used for delicate petals like jasmine and tuberose; maceration, for tougher flowers and leaves, roots and bark; solvent extraction, the preferred method for gums and resins like myrrh and galbanum; and hand expression, chiefly employed for squeezing the highly aromatic oils from thick-skinned citrus fruit like oranges, tangerines and lemons.

The Properties and Uses of Essential Oils

Essential oils possess numerous properties which make them useful for treating many of our most common health and beauty troubles.

Professor Paolo Rovesti, Director of the Instituto Derivati Vegetali in Milan, has studied the effect of essential oils on the psyche and found that they can be useful in the treatment of anxiety and depression. He recommends ylang-ylang, citrus oils, jasmine, basil, patchouli and

peppermint for treating general depression, geranium, lavender and bergamot for treating fear and anxiety, and peppermint, rose and carnation for improving concentration and eliminating lethargy. Sprayed into the air, these oils also have immediate and long-lasting effects.

The reasons for these reactions are as yet unclear, but it is known that odour molecules are perceived by thousands of tiny nerve cells in the nose and that each of these nerves is connected to that part of the brain which is concerned with emotional drives, creativity and sexual behaviour. This could explain why certain perfumes make us feel happy, why some essences, like jasmine and rose, have a reputation for being aphrodisiac and why unpleasant smells, like petrol fumes, can induce depression. While pure essential oils appear to have a positive influence on the psyche, it is doubtful that synthetic ones work in the same way.

Spices are conventionally used as flavourings in, for example, Indian or Thai dishes. Spices are usually the dried, aromatic parts of plants, generally the seeds, berries, roots, pods and sometimes leaves and flesh, which mainly, but not invariably, grow in hot countries.

The medicinal uses of spices in the past were often indistinguishable from their culinary uses, particularly so in mediaeval times, when apothecaries prescribed herbs and spices not merely for digestive problems, but for all types of ailments. Hot spices, such as pepper, were regarded as an appetite stimulant and a digestive aid; asafoetida, now known only in Indian cookery, was used by the Romans as a healing ointment, an antidote for snake bites, and an cure for gout, cramps, pleurisy, and tetanus; spiced salts were made with ginger, pepper, cumin, thyme and celery seed which were good for the digestion, promoting regularity and preventing ll sorts of illnesses, plagues and chills; and citron seeds were given to pregnant women to relieve nausea. Roman and mediaeval writers also believed the fennel helped to promote and restore good vision and it was at one time a cure for obesity.

Chinese herbal medicine has been known in China for several thousands of years. Only recently, however, has it become recognised in the West that Chinese herbs may be used to treat medical conditions.

The inventors have unexpectedly found that it is possible to combine

essential oils with naturally occurring spices and/or herbs to produce medicinal compositions which may be taken orally or which may be directly absorbed through the skin. Compositions of the invention may be used to treat a surprising range of illnesses.

Such compositions are especially important with the move by many members of the public towards more "natural" treatments, which do not use artificial medicines.

Accordingly a first aspect of the invention provides a medicinal or cosmetic composition comprising at least one essential oil in combination with at least one spice and/or herb. Preferably the spice is an "Indian spice" as defined herein. The herb is preferably a "Chinese herb" as defined herein.

Preferably the composition comprises an Aloe vera extract. This is the preferred delivery vehicle for the essential oil and spice and/or herb. It is preferred since it is readily accepted by the body and has not been found to produce allergic reactions or side effects. Preferably the extract is concentrated.

The composition may comprise a honey product such as royal jelly or bee propolis. Royal jelly and bee propolis have been used for many years to treat a wide range of conditions and as nutrient supplements.

Indian brandee may also be incorporated with the composition. Indian brandee has been used for many years as to relieve flatulence and colic. Its main ingredients are rhubarb tincture, capiscum tincture, ethanol, cochineal and methyl hydroxybenzoate.

The composition may also comprise one or more flavourings, such as blackcurrant concentrate, vitamins, amino acids and minerals.

Examples of vitamins include Vitamin C and Vitamins E and D, which may be in the form of alpha-tocopherol. Inositol, pepsin, selenium methionine, soya isolate, trace mineral clay, whey protein, zinc amino acid chelate and individual amino acids such as lysine may be used.

Enzymes, such as plant extracts comprising enzymes may also be incorporated.

The essential oils, spices, herbs and vitamins and amino acids preferably used within the invention are shown in Tables 1 to 4.

Preferably the compositions comprise one or more essential oils selected from:

- (a) bergamot, chamomile german, chamomile maroc, chamomile roman, cinnamon zeylanicum, clove buds, eucalyptus globulus, frankincense, fennel, hyssop, juniper, lemon grass, mountain savoury, niaouli, red thyme, rosemary, rose geranium, tagestes and ylang ylang.

The compositions may comprise one or more Chinese herbs selected from:

- (b) acacia catechu, acanthopanax gracilistylus, caesalpinia sappan and epimedium spinosa.

Preferably the compositions comprise one or more spices selected from:

- (c) asapoetidia, coconut, coriander, fenugreek and horseradish.

Preferably the composition comprises all of the oils, herbs and spices from lists (a), (b) and (c). This combination has been found to especially improve the effectiveness of the compositions.

Compositions of the invention may be used in combination with alternative methods of treatment such as aromatherapy, Bach flowers therapy, reflexology, acupuncture and/or the Alexander technique, all of which are known in the art.

The invention may be used orally or topically. Accordingly the invention preferably provides tablets or capsules comprising the compositions of the invention for oral administration.

Compositions for topical administration comprising the compositions according to the invention are also provided.

The invention further provides the use of a medicinal composition according to the invention for the treatment of disease or physical disability or sports injuries, or for the build up and maintenance of the immune system, or for the protection against disease or pollution.

The use of cosmetic formulations according to the invention are also provided for skin care and/or weight management.

aromatherapy and/or reflexology and/or physiotherapy to produce enhanced results.

Essential oils are typically extracted by steam distillation, expression (hard pressing) or maceration, as indicated in Table 1. Such techniques are well known in the art.

Spices are preferably selected from Table 2.

CHINESE HERBS

Herbs and Their Properties

In China the herbs used are gathered from the wild by hand. The best ones grow far from human habitation, and the herbalists who gather them will also be botanists, explorers, climbers and environmentalists. They need to be able to identify the relevant herb in all stages of its development, know where the finest ones grow, be able to get to the plants even when they grow in highly inaccessible places, know how much they can take without threatening a particular species, and always be on

the look-out for new sources and new species.

They are mostly imported from Hong Kong, although some come from mainland China via Beijing and Shanghai. Increasingly, as China opens its doors to the West, better access will be granted for importing herbs.

Some herbalists import their herbs directly, while others purchase them from Chinese herbal cash and carry stores in the West or from mail order suppliers.

Examples of Chinese herbs which may be used in the invention are listed in Table 3.

Preservation

Once the herbs have been collected from the wild they need to be treated so that they will keep their essential qualities during storage. They are always washed and dried. The method of drying varies depending on the particular herb and what it is going to be used for. They may be sun-dried or dried in a clay oven, alone or with other herbs. Sometimes they are dried with minerals such as sulphur, which bleaches them and also acts as

a preservative. Occasionally you may hear of herbs being treated. This means that, after drying, they are stir-fried with angelica and milk vetch to enhance their properties. Some may also be buried in the ground to absorb moisture, or cooked in a clay pot with rice wine or honey to increase their potency.

Cutting up Herbs

Before or after they have been dried, the herbs will need to be cut up using a herb chopper. When this is done depends on the herb and its eventual usage. There are several ways of cutting herbs. Large roots are often sliced across at 90 degrees, which gives them a round cross-section, while smaller ones are cut at an angle to give a larger surface area. Some herbs are chopped very finely and compressed into a cake.

Some herbs have to be ground to a powder and this is done using a mortar and pestle with a lid, to avoid the loss of powder during crushing.

Storage

Traditionally, herbs would be stored in clay pots after preservation and

cutting up. The shape of the clay pots and whether they were covered or uncovered depended on the herbs. The Chinese have always used clay pots, because clay was the simplest and cheapest material to get hold of and also because, when glazed and therefore non-absorbent, it helped to keep the properties of the herbs intact.

Modern herbalists increasingly use glass jars and bottles for herb storage, but still rely on wooden drawers for the bulk of their stocks because this is the easiest and most convenient method of dispensing them. These drawers are rarely labelled, as the herbalist is completely familiar with their contents. Since the drawers are arranged according to meridians and properties it would be hard for the herbalist to make a mistake that would result in a herb of a totally different type being dispensed.

Freshness of Stocks

However the herbs are stored, herbalists will check them periodically for mould and other signs of decay.

Herbs may need to be retreated - that is, washed and boiled, redried and, where necessary, freshly treated with angelica again in the same way that

fresh herbs are.

Weighing Herbs

Because it is so expensive, ginseng is weighed in very sensitive scales which have divisions of 0.1 of a gram.

Other herbs do not need quite such accurate scales, and larger ones can be used. These are accurate to within approximately 3 grams. Both sorts of scales are used by holding one of the strings near the pan and adjusting the weight on the rod.

Metric weights have been used for convenience, but Chinese herbalists use Chinese weights. Their names and metric equivalents are given below.

1 fan		= 0.3 grams approx
10 fan	= 1 qin	= 3 grams approx
10 qin	= 1 lian	= 30 grams approx
16 lian	= 1 jin	= 480 grams approx

Whenever scales are used, the weight given is always that of the herb before any stir-frying which may be specified on the prescription. The

herbs may be fried in honey, water or rice wine, or 'burned' until black in a red-hot wok. These treatments naturally change the weight of the herb, and it is not unknown for patients to weight their herbs afterwards and mistakenly complain that they have been short-changed by the herbalist.

Boiling and Steaming

As soon as possible after collection, the herbs are boiled in clay pots. These come in a variety of shapes and sizes much like Western saucepans. It used to be traditional to throw away all pots used in medicinal preparations on the Chinese New Year's Eve. But few herbalists in the West can afford to do this now, especially since some of the decorated pots are extremely expensive.

Steam pots are used a lot for medicinal foods. The ingredients are added to the pot, after which both lids are put on and fastened by a string which passes through the handles. The pot is then placed in a larger pot of boiling water. The herbs and other ingredients are gently cooked by the rising steam without losing any valuable elements which might otherwise be boiled out.

Properties of Commonly Used Chinese Herbs

In the following lists the Chinese name has been used, along with the botanical name and the Western common name where possible. (Some Chinese herbs are not native to the West and have no corresponding Western name so in these cases the literal English translation has often been included.) Most of the herbs described here can be used in their fresh state, but they can all be ordered as dried herbs. Dosages given are standard ones from which herbalists would raise or lower according to the individual. It is interesting to note that many of the Chinese names have suffixes denoting parts of the plant, for example: hua/flower; pi/cortex or peel; ren/seeds; ye/leaf; zi/fruit or seeds. The dosage refers to the total dose over the course duration.

Bai Shao	<i>Paeonia lactiflora</i> , <i>P. obovata</i>	White peony root
Part used:	root, sliced	
Meridian:	liver	
Taste:	sweet	
Usage:	for abdominal pains after childbirth combine with Dang Gui (<i>Angelica sinensis</i> /Chinese angelica), Chuan Xiong (<i>Ligustrum wallichii</i> /Szechuan lovage root) and Hong Hua (<i>Carthamus tinctorius</i> /safflower).	
Dosage:	6-15g	
Note:	Do not use with black false hellebore (<i>Veratrum nigrum</i>)	
Bai Zhu	<i>Atractylodes macrocephala</i>	Attractylodes
Part used:	root	
Meridians:	spleen, stomach	
Taste:	bitter-sweet	
Usage:	to correct mischannelling of qi at the spleen and stomach. Used to treat loss of appetite, extended tight abdomen, vomiting and bowel disorders. It is safe to use during pregnancy.	
Dosage:	4.5-9g	
Gan Cao	<i>Glycyrrhiza uralensis</i> , <i>G. glabra</i>	Liquorice
Part used:	root	
Meridians:	all	
Taste:	sweet	
Usage:	one of the most frequently used Chinese herbs. It can be used on its own to assist the spleen, dispel heat and restore qi. It is used to treat sore throats and to relieve food poisoning. It is most often used with other herbs to moderate their effects. It is also used to alleviate any uncomfortable side-effects which may be felt after taking other medicinal herbs.	
Dosage:	1.5-9g	
Gou Qi Zi	<i>Lycium chinense</i>	Lycium
Part used:	seed	
Meridians:	liver, kidneys	
Taste:	sweet	
Usage:	to strengthen shen and kidneys, and to improve eyesight, used with Sheng Di Huang (<i>Rehmania glutinosa</i> /Chinese foxglove root), Ju Hua (<i>Chrysanthemum morifolium</i> /chrysanthemum) and Shan Zhu Yu (<i>Cornus officinalis</i> /fruit of Asiatic cornelian cherry). Used with Sheng Di Huang (<i>Rehmania glutinosa</i>) and Tian Men Dong (<i>Asparagus cochinchinensis</i> /asparagus root) to treat deficient liver and/or kidneys as well as tinnitus, dizziness and weakness of the knees, and for the prevention of wet dreams.	

Dosage: 6-12g

Gou Teng *Nauclea rhynchophylla* also (*Unicaria*)
Part used: thorn
Meridians: heart, liver
Taste: sweet
Usage: to stop convulsions, tics and spasms used with Tian Ma (*Gastrodia elata*/Gastrodia rhizome). For the treatment of red eyes caused by headaches used with Ju Hua (*Chrysanthemum morifolium*/ chrysanthemum), Sang Ye (*Morus alba*/white mulberry leaves) and Bo He (*Mentha arvensis*/mint). It does not need boiling.
Dosage: 6-12g

Gui Zhi *Cinnamomum cassia* Cinnamon twigs
Part used: bark
Meridians: heart, lungs, bladder
Taste: sweet
Usage: used in combination with Ma Huang (*Ephedra sinica*/Ephedra) if the patient does not sweat; if they do, given with peeled Chi Shao (*Paeonia veitchii*/red peony root). Used in combination with Qiang Huo (*Notopterygium incisum*) to relieve pain in joints, especially arthritis. Used with Dang Gui (*Angelica sinensis*/Chinese angelica) or Chuan Xiong (*Ligustrum wallichii*/Szechuan lovage root) to treat period pains and menstrual irregularity.
Dosage: 3-9g (slightly more if used for arthritis)
Note: Avoid during pregnancy

Huang Qi *Astragalus membranaceus* Milk vetch
Part used: root, sliced, either raw or stir-fried in honey
Meridians: lungs, spleen
Taste: sweet
Usage: given as a tonic to patients recovering from illness or feeling tired and weak. Can be used in conjunction with ginseng. This is one of most commonly prescribed herbs in Chinese medicine, and symptoms which would point to its use include loss of appetite, coldness, shortness of breath and a tendency to sweat a lot.
Dosage: 9-30g

Huang Qin	<i>Scutellaria baicalensis</i>	Baical skullcap root
Part used:	root, raw or stir-fried in rice wine	
Meridians:	gall bladder, small intestine, lungs, large intestine, spleen	
Taste:	bitter	
Usage:	for throat pain used with Lian Qiao, (<i>Forsythia suspensa</i> /forsythia fruit) and Jin Yin Hua (<i>Lonicera japonica</i> /honeysuckle flower). For relieving high blood pressure used with Ju Hua (<i>Chrysanthemum morifolium</i> /chrysanthemum) and Gou Teng (<i>Nauclea ryncholophylla</i>).	
Dosage:	3-10g	
Jing Jie	<i>Schizonepeta tenuifolia</i>	
Part used:	seeds	
Meridians:	none specific	
Taste:	tangy	
Usage:	to stop swellings and as an excellent painkiller. Used more than any other herb for the treatment of arthritis. Fried until very dark in colour it is used to stop bleeding, especially from haemorrhoids.	
Dosage:	3-9g	
Ma Huang	<i>Ephedra sinica</i>	Ephedra
Part used:	stalk	
Meridians:	bladder, lungs	
Taste:	tangy	
Usage:	used in combination with Gui Zhi (<i>Cinnamomum cassia</i> /cinnamon) to aid sweating. Stir-fried in honey and apricot kernels, restores the function of the lungs and suppresses asthma, especially with coughing. Used with Sheng Jiang (<i>Zingiber officinale</i> /fresh ginger rhizome (root) and Bai Zhu (<i>Atractylodes macrocephala</i>) to reduce swelling.	
Dosage:	3-9g	
Note:	not suitable for patients who suffer from insomnia or high blood pressure. Not to be used by patients who are already sweating.	
Mai Men Dong	<i>Ophiopogon japonicus</i>	'Lush winter wheat'
Part used:	root nodules, used raw and pressed flat	
Meridians:	stomach, lungs, heart	
Taste:	bitter	
Usage:	to restore yin. Used with Ban Xia (<i>Pinellia ternata</i> /'Half summer') and liquorice for coughs and dry throat. Used with Sheng Di Huang (<i>Rehmania glutinosa</i> /Chinese foxglove root), Xuan Shen (<i>Scrophularia Ningpoensis</i> /Ningpo figwort root), Huang Lian (<i>Coptis chinensis</i> /golden thread) and Dan Shen (<i>Salvia miltiorrhiza</i> /'Scarlet root') for insomnia.	
Dosage:	6-12g	
Mu Dan Pi	<i>Paeonia suffruticosa</i>	Tree peony

Part used: bark
Meridians: kidneys, liver, heart
Taste: bitter
Usage: to lower high blood pressure, used with Ju Hua (*Chrysanthemum morifolium*/chrysanthemum) and Jin Yin Hua (*Lonicera japonica*/honeysuckle flower). For menstrual disorders, used with Chai Hu (*Bupleurum chinense*/thorowax) and Dan Gui (*Angelica sinensis*/Chinese angelica). To stop bleeding in internal wounds, dry-fried until dark and given with Hong Hua (*Carthamus tinctorius*/safflower). For period pain, raw slices given with Gui Zhi (*Cinnamomum cassia*/cinnamon) and Hu Tao Ren (*Juglans regia*/walnut). To stimulate the production of blood and to disperse bruises, used fried in rice wine with cinnamon and walnuts.
Dosage: 6-12g
Note: not suitable for use during pregnancy

Qing Hao *Artemisia annua*, *A. apiacea* Wormwood
Part used: leaves
Meridians: liver, gall bladder
Taste: bitter, but with a very pleasant smell
Usage: for the treatment of burns and minor skin disorders, fresh leaves are crushed and applied externally. For the treatment of malaria, used with Huang Qin (*Scutellaria baicalensis*/Baical skullcap root). Ban Xia (*Pinellia ternata*) and Maronta arundinacea (arrowroot).
Dosage: 20-40g for malaria, 6-15g for skin applications
Note: this herb responds best to rapid, short boiling

San Qi *Panax notoginseng* Pseudoginseng root
Part used: whole plant (it is similar to ginseng)
Meridians: kidneys, liver
Taste: bitter
Usage: to disperse bruises, relieve swellings and stop haemorrhaging, and for general relief of pain.
Dosage: for wounds and pain 1-1.5g powder three times a day; for cardiac arrest 1.5g twice a day in equal proportions with ginseng

Shan Zhu Yu *Cornus officinalis* Cornelian Asiatic cherry
Part used: flesh of fruit
Meridians: liver, kidneys
Taste: bitter-sour
Usage: used in the treatment of abnormally heavy menstruation. Used with ginseng to treat heavy sweating accompanied by exhaustion.

SUBSTITUTE SHEET (RULE 26)

Dosage: 4.5-9g

Shi Chang Pu

Acorius gramineus

Sweetflag

Part used: root

Meridians: heart, spleen, stomach

Taste: tangy

Usage: for excess tan (mucus). Used with Zhi Zi (*Gardenia jasminoides*/Cape jasmine), young bamboo leaves and extracted ginger juice for treating delirium. To treat tinnitus and amnesia, given with Fu Ling (*Poria cocos*/hoelen) and Yuan Zhi (*Polygala tenuifolia*/root of Chinese Senega). For loss of appetite, given with Huo Xiang (*Agastache rugosa*/Patchouli), Huo Po (*Magnolia officinalis*/magnolia) and Chen Pi (*Citrus reticulata*/tangerine peel).

Dosage: 3-9g

Shu Di Huang

Rehmania glutinosa

Root of Chinese foxglove
cooked in wine

Part used: root (oven dried or fresh)

Meridians: liver, kidneys, heart

Taste: sweet

Usage: a) to relieve cold in the blood. Used with Xuan Shen (*Scrophularia ningpoensis*/Ningpo figwort) to reduce high body temperature, dry mouth and red tongue. Given with He Ye (*Nelumbo nucifera*/lotus leaves) and Qian Cao Gen (*Rubia cordifolia*/madder root) for blood in vomit or urine. Used with Mu Dan Pi (*Paeonia suffruticosa*/cortex of tree peony root) for macula or dark spots on the skin. To treat thirst associated with diabetes, used with Bi Xie Xu Duan (*Dioscorea batatas*/Chinese yam) and Di Gu Pi (*Lycium chinense*/Chinese wolfberry).
b) Used dried, then fried in rice wine until dark, for restoration of the blood, weakness of the knees, menstrual disorders and tinnitus.

Dosage: a) 9-30g (double if fresh), b) 9-15g

Tian Ma

Gastrodia elata

Gastrodia rhizome

Part used: tuber

Meridian: liver

Taste: sweet

Usage: to clear collateral channels and to relieve rheumatic pain, given with Jin Yin Hua (*Lonicera japonica*/honeysuckle flower) and Huai Niu Xi (*Achyranthes bidentata*/'Ox knee'). Given with Ban Xia (*Pinellia ternata*/'Half summer') and Bai Zhu (*Atractylodes macrocephala*) in the treatment of migraine, eye

	disorders and dizziness. Excellent for women suffering headaches, especially after childbirth.	
Dosage:	3-9g boiled in water, 1-1.5g as a powder	
Tian Men Dong	<i>Asparagus cochinchinensis</i>	Tuber of Chinese asparagus
Part used:	root, raw and sliced	
Meridians:	lungs, kidneys	
Taste:	bitter-sweet	
Purpose:	to restore deficient yin. Dispels heat and strengthens the kidneys and lungs.	
Usage:	to treat a dry cough with little mucus, or coughing up of blood, use with Mai Men Dong (<i>Ophiopogon japonicus</i> 'Lush winter wheat') and Bei Mu (<i>Fritillaria verticillata</i> /fritillaria bulb). For use in the treatment of whooping cough with Mai Men Dong (<i>Ophiopogon japonicus</i> 'Lush winter wheat') and Bai Bu (<i>Stemona sessilifolia</i> /stemona root).	
Dosage:	6-12g	
Tu Si Zi	<i>Cuscuta chinensis</i>	Dodder seeds
Part used:	seeds, boiled and crushed, sometimes in cake form	
Meridians:	kidneys, lungs	
Taste:	sweet	
Purpose:	to treat deficient yang in the kidneys, which causes frequent urination. Also used to prevent miscarriages and to help restore the function of the kidneys and menstrual cycle	
Dosage:	6-12g	
Wu Wei Zi	<i>Schizandra chinensis</i> , <i>S. spenantha</i>	Schisandra fruit
	The Chinese name means 'the fruit which has five tastes'. It has two forms, northern (<i>S. Chinensis</i>) and southern (<i>S. spenantha</i>).	
Part used:	fruit, raw or steamed with vinegar or rice wine	
Meridians:	kidneys, heart, lungs	
Taste:	sour	
Usage:	for coughs caused by weakness of the lungs, sometimes in combination with ginseng. Use with Mai Men Dong (<i>Ophiopogon japonicus</i> 'Lush winter wheat') to treat patients who sweat, have a dry mouth, tire easily and are depressed.	
Dosage:	1.5-6g	
Xin Yi Hua	<i>Magnolia liliflora</i>	Magnolia flower
Part used:	flower	
Meridians:	none specific	
Taste:	tangy	
Usage:	for the treatment of rhinitis and nasosinusitis. Clears running nose and headaches.	
Dosage:	1-3g	

Yin Yang Huo	<i>Epimedium brevicornum</i> , <i>E. grandiflorum</i> , <i>E. sagittatum</i>	'Licentious goat wort'
Part used:	the whole plant apart from the root	
Meridians:	liver, kidneys	
Taste:	sweet	
Usage:	used to treat high blood pressure in elderly women, impotence and paralysis of the lower limbs.	
Dosage:	3-9g	
Yu Xing Cao	<i>Houttuynia cordata</i>	'Fishy smelling herb'
Part used:	whole herb	
Meridians:	kidneys, lungs	
Taste:	sweet with a fishy odour, hence it is also known as the smelly fishy plant	
Usage:	the treatment of lung and kidney disorders.	
Dosage:	9-30g	
Yuan Zhi	<i>Polygala tenuifolia</i>	Root of Chinese senega
Part used:	root, chopped and treated with liquorice	
Meridians:	lungs, heart, kidneys	
Taste:	bitter	
Usage:	for treatment of irritability, insomnia and depression.	
Dosage:	3-9g	
Zi Su Ye	<i>Perilla frutescens</i>	Perilla leaf
Part used:	leaves	
Meridians:	spleen, lungs	
Taste:	sweet	
Usage:	to promote ch'i, to relieve pain and tightness in the abdomen, to cancel out the effects of food poisoning (especially when caused by seafood), to ease vomiting and diarrhoea.	
Dosage:	6-12g	

Also part of the herbalist's traditional repertoire will be such well-known herbs as ginseng, garlic and ginger. Ginseng (Panax ginseng) is the dried root of the Ren Shen plant which is grown mainly in Japan and Korea. Its main uses are to help strengthen weak bodies and to help patients recovering after illness. It is used extensively as a nutritive and restorative tonic and to treat impotence, neurasthenia, spermatorrhoea, anaemia, senility, uterine disorders and nephritis.

Ginger is the fresh root of *Zingiber officianale* (Gan Jiang) and is used mainly as a stomach restorative. It is used in the treatment of nausea and vomiting as well as diarrhoea, rheumatism, abdominal and spleen ache and sometimes for strider - obstructed breathing.

Garlic (*Allium sativum*) known as Xie Bai to the Chinese, is used to thin the blood. It is known to reduce blood cholesterol, prevent heart disease, aid digestion and to lower blood pressure.

The preferred form of the vitamins and amino acids are shown in Table

4. "Pepsin" refers to commercially available pepsin digest.

TABLE 4VITAMINS AND AMINO ACIDS

Vitamins & Amino Acids	Method
L-Phenylalanine	Extraction
Vitamin C	Extraction
Vitamin E	Extraction
Vitamin ED	Extraction
Inositol	Trace Mineral
Selenium Methionine	Trace Mineral
Soya Isolate	Trace Mineral
Trace Mineral Clay	Trace Mineral
Lysine	Compound
Pepsin	Compound
Whey Protein	Compound
Zinc Amino Acid Chelate	Compound
Co-enzyme Q	
Superoxide Dismutase	
Vegetable enzymes	
Iron Gluconate	
Copper amino acid gluconate	
Calcium amino acid gluconate	
L-Threonine	
Chromium niacin	
Selenium methionine	
L-phenylalanine	

The invention will now be described by way of example.

The product formulae below show the dosage, for the disorders treatable by the composition, the amounts of the components used and therapies which may be used in combination with the compositions. Typically capsules contain between 200mg and 1g of composition per capsule.

The formulations may be taken neat or diluted with, for example 50% volume/volume cordial, fruit juice or lemonade.

The dosages may be separated into, for example, 3 equal doses taken after breakfast, lunch and an evening meal.

Skin care, massage and sports injury remedies may be applied topically directly onto the area to be "treated".

The Aloe vera, honey products, vitamins/amino acids, Indian brandee and blackcurrant concentrate are all commercially available products.

The Aloe vera products, heat lotion and propolis creme may be obtained from Forever Living Products (UK) Ltd, Longbridge Manor, Longbridge,

Warwick, Warwickshire, United Kingdom. Aloe vera "juice" comprises as main ingredients stabilised Aloe vera gel, sorbitol, lemon juice, vitamin E, sodium benzoate and papain. "Pure" Aloe vera comprises stabilised Aloe vera gel, sorbitol, citric acid, vitamin E, sodium benzoate and papain. Aloe vera "nectar" comprises raw Aloe vera gel, fructose, sorbitol, cranberry and apple juice concentrate, ascorbic acid, citric acid, potassium sorbate, sodium benzoate, xanthan gum, tocopherol and colourings.

Heat lotion comprises stabilized Aloe vera gel, DI water, propylene glycol, stearic acid, glyceryl stearate, triethanolamine, eucalyptus oil, methyl salicylate, apricot kernel oil, sesame oil, cetyl alcohol, petrolatum, lanolin, jojoba oil, oleic acid, stearyl stearate, dioctyl adipate, octyl stearate, octyl palmitate, PEG-100 stearate, allantoin, mineral oil, lanolin alcohol, ascorbic acid, diazolidinyl urea, methylparaben and propylparaben.

Propolis creme comprises stabilized Aloe vera gel, glyceryl stearate (and) PEG-1-00 stearate, propylene glycol, cetyl alcohol, dioctyl adipate (and) octyl stearate (and) octyl palmitate, lanolin, sorbitol, allantoin, bee propolis extract, lanolin alcohol, dimethicone, mineral oil, imodazolidinyl, urea, vitamins A & E, comfrey extract, chamomile extract, triethanolamine, ascorbic acid, methylparaben, propylparaben, fragrance.

Rescue remedy is a composition of five Bach flower remedies: Impatiens, Star of Bethlehem, Cherry Plum, Rock Rose and Clematis.

Except where indicated, the essential oils, Chinese herbs/Indian spices, honey products, vitamins/amino acids, Indian brandee and blackcurrant concentrate are mixed together in the amounts indicated with sufficient Aloe vera to make the final formulation up a final volume of 1,000 ml.

All components are from commercial sources. Vegetable enzymes are obtained as a commercially available product from "G and G Foods (UK)".

Initial results indicate that the specific essential oil and herb/spice combination of the invention provides effective compositions for medical and/or cosmetic use.

PATIENT PILOT STUDY

From a database of 250 people, having been diagnosed by their own practitioner as having M.E./Chronic Fatigue Syndrome, 80 responded to the inventors for information requesting to take the particular formula.

The findings of this initial pilot study indicated:

- i) One third of the respondents diagnosed with M.E./Chronic Fatigue Syndrome did not have this condition. Most had Candida, depression or arthritis. A number suffered from a combination. Due to the similarity and overlap of many symptoms, without practitioners being able to measure the response by administering separate formula for each of these conditions, it is not possible for them to accurately disseminate between these four conditions.
- ii) When a patient has been accurately diagnosed and they take the respective formula, as shown in Table 5, correctly, a full recovery is apparent at the end of the 25 day ingestion period.
- iii) A pattern also became evident with about one third of patients making a partial recovery and in a few cases no realistic recovery. In all these cases it became apparent each respective formula of the inventors was being frustrated. After further discussion and analysis of the patient records a clear pattern emerged.

In the majority of cases these patients had been exposed to either one or a combination of the following traditional treatments:

- | | <u>Side Effects</u> |
|------------------------------|---------------------|
| (a) X-rays/scans | Medical irradiation |
| (b) Medical drugs | Misfunction |
| (c) Amalgam dental fillings | Mercury poisoning |
| (d) Organophosphate exposure | Nervous system |
- iv) The inventors then developed an additional 'body cleanser/irrigator' formula (Table 6). After taking this 25 day formula the original formula still resting within these patients was then released to perform.
 - v) Due to the alarming number of patients from referrals and potential patients suffering from the side effects of the above traditional treatments, the Foundation has successfully combined the 'irrigator' within each of its main formula. This prevents patients from having to take two formulae which doubles both the cost and time.

CLAIMS

1. A medicinal or cosmetic composition comprising at least one essential oil in combination with at least one spice and/or at least one herb.
2. A medicinal or cosmetic composition according to Claim 1, wherein the composition comprises one or more essential oils selected from: bergamot, chamomile german, chamomile maroc, chamomile roman, cinnamon zeylanicum, clove buds, eucalyptus globulus, frankincense, fennel, hyssop, juniper, lemon grass, mountain savoury, niaouli, red thyme, rosemary, rose geranium, tagestes and ylang ylang.
3. A medicinal or cosmetic composition according to Claims 1 or 2, wherein the composition comprises one or more Chinese herbs selected from: Acacia Catechu, Acanthopanax Gracilistylus, Caesalpinia Sappan and Epimedium Spinosum.
4. A medicinal or cosmetic composition according to any preceding claim wherein the composition comprises one or more spices selected from: asapoetidia, coconut, coriander, fenugreek and horseradish.

5. A medicinal or cosmetic composition according to any preceding claim comprising

(a) the following essential oils:

bergamot, chamomile german, chamomile maroc,
chamomile roman, cinnamon zeylanicum, clove
buds, eucalyptus globulus, frankincense,
fennel, hyssop, juniper, lemon grass, mountain
savoury, niaouli, red thyme, rosemary, rose
geranium, tagestes and ylang ylang.

(b) the following Chinese herbs:

Acacia Catechu, Acanthopanax Gracilistylus,
Caesalpinia Sappan and Epimedium Spinoso.

(c) the following spices:

asapoetidia, coconut, coriander, fenugreek and
horseradish.

6. A medicinal or cosmetic composition according to any preceding claim additionally comprising an Aloe vera extract.

7. A medicinal or cosmetic composition according to any preceding claim in combination with a honey product.
8. A medicinal or cosmetic composition according to any preceding claim in combination with one or more vitamins, minerals, amino acids, enzymes, flavourings and/or Bach flower remedies.
9. A tablet or capsule for oral administration comprising a medicinal or cosmetic composition according to any preceding claims.
10. A composition for topical application comprising a medicinal or cosmetic composition according to any one of Claims 1-8.
11. The use of a medicinal composition according to any one of Claims 1-8 for the treatment of disease or physical disability or sports injuries, or for the build up and maintenance of the immune system, or for the protection against disease or pollution.
12. The use of a cosmetic formulation according to any one of Claims 1-8 for skin care and/or weight management.

INTERNATIONAL SEARCH REPORT

International Application No
PCT/GB 98/00708

A. CLASSIFICATION OF SUBJECT MATTER
IPC 6 A61K35/78 A61K7/06

According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)
IPC 6 A61K

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practical, search terms used)

C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category *	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
X	<p>DATABASE WPI Section Ch, Week 9718 Derwent Publications Ltd., London, GB; Class B04, AN 97-200618 XP002070665 & RU 2 066 194 C (BOBROV-EGOROV N N)</p>	1, 2, 4, 7-11
A	<p>see abstract</p>	2, 5
X	<p>DATABASE WPI Section Ch, Week 9409 Derwent Publications Ltd., London, GB; Class D16, AN 94-072571 XP002070666 & RU 2 001 095 C (BREKHMANN I I)</p>	1, 3, 7, 9, 11

☒ Further documents are listed in the continuation of box C.

☒ Patent family members are listed in annex.

* Special categories of cited documents:

- "A" document defining the general state of the art which is not considered to be of particular relevance
- "E" earlier document but published on or after the international filing date
- "L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
- "O" document referring to an oral disclosure, use, exhibition or other means
- "P" document published prior to the international filing date but later than the priority date claimed

- "T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
- "X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
- "Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.
- "&" document member of the same patent family

Date of the actual completion of the international search

28 August 1998

Date of mailing of the international search report

18.09.98

INTERNATIONAL SEARCH REPORT

International application No.
PCT/GB 98/00708

Box I Observations where certain claims were found unsearchable (Continuation of item 1 of first sheet)

This International Search Report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. ☐ Claims Nos.:
because they relate to subject matter not required to be searched by this Authority, namely:

2. ☐ Claims Nos.:
because they relate to parts of the International Application that do not comply with the prescribed requirements to such an extent that no meaningful International Search can be carried out, specifically:

3. ☐ Claims Nos.:
because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

Box II Observations where unity of invention is lacking (Continuation of item 2 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:

see additional sheet

1. ☐ As all required additional search fees were timely paid by the applicant, this International Search Report covers all searchable claims.

2. ☐ As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.

3. ☒ As only some of the required additional search fees were timely paid by the applicant, this International Search Report covers only those claims for which fees were paid, specifically claims Nos.:

1-11(PART)

4. ☐ No required additional search fees were timely paid by the applicant. Consequently, this International Search Report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:

Remark on Protest

- ☐ The additional search fees were accompanied by the applicant's protest.
- ☒ No protest accompanied the payment of additional search fees.

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

This International Searching Authority found multiple (groups of) inventions in this international application, as follows:

1. Claims: 1(part.),2(part.),4(part.),6-11(all part.)

Compositions comprising an essential oil in combination with a spice and use thereof for the treatment of disease or physical disability.

2. Claims: 1(part.),2(part.),3(part.),4(part.),6-11(all part.)

Compositions comprising an essential oil in combination with a herb and use thereof for the treatment of disease or physical disability

3. Claims: 1(part.),2(part.),3(part.),4(part.),5,6-11(all part.)

Compositions comprising an essential oil, one spice and a herb and use thereof for the treatment of disease or physical disability

4. Claim : 11(part.)

Use of compositions comprising an essential oil in combination with a spice for the manufacture of a medicament for the treatment of sport injuries

5. Claim : 11(part.)

Use of compositions comprising an essential oil in combination with a spice for the manufacture of a medicament for the build up and maintenance of the immune system

6. Claim : 11(part.)

Use of compositions comprising an essential oil in combination with a spice for the manufacture of a medicament for the protection against pollution

7. Claim : 12(part)

Use of compositions comprising an essential oil in combination with a spice for the manufacture of a medicament for skin care

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

8. Claim : 12(part.)

Use of compositions comprising an essential oil in combination with a spice for the manufacture of a medicament for weight management

9. Claim : 11(part.)

Use of compositions comprising an essential oil in combination with a herb for the manufacture of a medicament for the treatment of sport injuries

10. Claim : 11(part)

Use of compositions comprising an essential oil in combination with a herb for the manufacture of a medicament for the build up and maintenance of the immune system

11. Claim : 11(part.)

Use of compositions comprising an essential oil in combination with a herb for the manufacture of a medicament for the protection against pollution

12. Claim : 12(part.)

Use of compositions comprising an essential oil in combination with a herb for the manufacture of a medicament for skin care

13. Claim : 12(part.)

Use of compositions comprising an essential oil in combination with a herb for the manufacture of a medicament for weight management

14. Claim : 11(part.)

Use of compositions comprising an essential oil in combination with a spice and a herb for the manufacture of a medicament for the treatment of sport injuries

15. Claim : 11(part.)

Use of compositions comprising an essential oil in combination with a spice and a herb for the manufacture of a medicament for the build up and maintenance of the immune system

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

16. Claim : 11(part.)

Use of compositions comprising an essential oil in combination with a spice and a herb for the manufacture of a medicament for the protection against pollution

17. Claim : 12(part.)

Use of compositions comprising an essential oil in combination with a spice and a herb for the manufacture of a medicament for skin care

18. Claim : 12(part.)

Use of compositions comprising an essential oil in combination with a spice and a herb for the manufacture of a medicament for weight management
